SAFETY PRECAUTIONS

Warning symbol
When text is accompanied by the warning symbol shown here, this indicates that the information provided is essential for the health and personal safety of the mechanic. In addition, this warning symbol is also shown if there are conditions in which damage can be caused to the component or parts thereof.

Safety instructions
To ensure that the mechanic's health is not endangered, the following safety instructions must be strictly observed.

- Comply with all the warnings and safety instructions given in this component manual. First read the instructions and warnings on the labels and stickers which are affixed to various components on the vehicle and follow them! They have been put there for your health and safety, so do not ignore them!

- Wear clean, fitted clothes and apply protective cream to unprotected parts of your body, as necessary.

- Ensure proper extraction of dangerous materials from the work area.

- Maintain a safe distance from rotating and/or moving parts.

- Avoid unnecessary contact with drained oil. Frequent contact damages the skin.

- Various sorts of oil and other lubricants used on the vehicle may constitute a health hazard. So avoid both inhaling and direct contact with these.

- Exercise caution when working with springs under pressure. Inadvertently released springs may cause serious injuries. Small springs and circlips may also cause injuries when inadvertently released (wear goggles).
